

Product Benefits

- ◆ Research proven
- ◆ Waste treatment specifically for dairy
- ◆ Contains lignin degraders
- ◆ Contains aerobic and anaerobic strains of microorganisms
- ◆ Can be used in any kind of manure storage system such as in-ground storage, above ground storage, or lagoons.

How does Accelerator work?

Accelerator contains specific bacteria, fungi, and enzymes that enhance the natural process of waste digestion. **Accelerator's** lignin degrading fungi and proteolytic bacteria increase microbial decomposition. This in turn...

- ◆ **Reduces crust build-up**
- ◆ **Decreases sludge accumulation**
- ◆ **Allows for easier agitation**
- ◆ **Assists with faster and easier pumping**
- ◆ **Permits a more complete clean out process**
- ◆ **Maintains fertilizer value of manure**
- ◆ **Allows for a more uniform field application**
- ◆ **Reduces offensive odors**

The bacillus organisms in **Accelerator** reduce odors in stored manure by changing the decomposition process, preventing the accumulation of volatile fatty acids and other odorous end products. Also, the microorganisms in **Accelerator** reduce the anaerobic digestion of nitrogen in the manure. This reduces the ammonia production and the loss of nitrogen from the waste.

Directions for Use

Guaranteed Analysis: 18,000,000,000 CFU's per gram.

Ingredients: Bacillus fermentation products, fungi, enzymes, and sugar.

Usage: Rehydrate the required amount of **Accelerator** in warm water (5 gallons/2 jars), mix, and let stand for 10 minutes. Add the mixture through the manure pump or directly into the pit, lagoon, or storage structure. Calculate the amount of stored manure currently in the facility to determine the amount of the initial treatment.

Application Rates: Initial application: 500g/100,000 gal. Monthly maintenance application: 250g/100 head

Storage: Store in a cool, dry place.

Packaging: **Accelerator** is packaged in 500 gram plastic bags and sold in cases of six bags per case.

Accelerator can also be used in organic production systems!
